TERRA-COTTA, as exhibited in Class 27 at Great Exhibition Building, noticed by the Editor of The Builder, and illustrated in the July number of the Builder.

PREVENTION OF FIRES.—The attention of those who are interested in building is respectfully invited to a METHOD OF CONSTRUCTING THE FLOORS, CEILINGS, and ROOFS OF HOUSES ON AN IMPROVED PRINCIPLE.

THIS most desirable object is attained by the substitution of iron-plate masonry, instead of brick and concrete, in the formation of the floor and roof; thereby superseding the use of timber work, &c. and retaining of soil, as may be desired.

THE ADVENTAGE OF WHICH IS SECURED BY MANY OF THE MOST IMPORTANT ADVANTAGES. AS A COST NOT GREATER THAN THAT OF THE ORDINARY MODE OF BUILDING WITH TIMBER.

From the published investigations of the most competent authorities, it would appear that no house in which timber joists are used is perfectly secure from the danger of fire; but no method of fire-proofing has been adopted in building, until the system of domestic buildings on account of the expense.

THE BUILDER'S ASSOCIATION, established for this object, have studied themselves of the advantages of this system in the construction of a large block of dwellings for sixty families, just completed in Finsbury-fields, and several large country houses, &c. &c. are also either completed or in course of erection, exhibiting a wide and extensive appreciation of the advantages of this improved plan of building.

A Plan which fully describes of the system, and all further information may be obtained on application to the proprietors of the patent, MESSRS FOX and HARRIS, THAMES CHAMBERS, 33, YORK BUILDINGS, &c. &c.
